TO THE HON. N. E. TANNER,  
*Minister of Lands and Mines.*

SIR:

I herewith submit the report of The Mines Branch for the year ending December 31, 1942.

Respectfully submitted,

A. A. MILLAR,  
*Chief Inspector of Mines.*

## ANNUAL REPORT OF THE MINES BRANCH FOR THE YEAR ENDING DECEMBER 31st, 1942

(ANDREW A. MILLAR, *Chief Inspector*)

The output of coal produced from mines in the Province during the year 1942 was 7,754,279 tons, with a valuation of \$22,562,352 this being an increase of 784,215 tons over the output produced in 1941, and is the highest tonnage of coal produced in the history of the Province.

It also exceeds by 420,100 tons the output of 1928, which was the year in which the previous highest recorded tonnage was mined in Alberta.

In addition to the above tonnage, there were 145 tons reported as mined by farmers under permit, for their own use.

It is also believed that due to the scarcity of coal and the extremely cold weather, that considerable illegal mining has been carried on this winter.

The disposition of coal during the year was as follows: 1,474,795 tons sold for consumption in Alberta; 2,733,485 tons sold for consumption in other provinces of Canada; 98,197 tons to the United States; 2,864,586 tons sold to railroad companies; 184,933 tons were used in making briquettes; 107,410 tons used in making coke; 168,193 tons were used under colliery boilers; 6,551 tons used by colliery railroads; 45,517 tons were put to stock, and 128,017 tons were put to waste. The above tonnages include coal lifted from stock and waste heaps, which is not included in the total output.

The railroads took 225,704 tons less than in 1941, and a small decrease was also made to Ontario. Nearly all the other provinces increased their shipments from Alberta over that of 1941, but due to war-time conditions, the free movement of coal has been interrupted to a considerable extent.

During the year, 5 shale pits produced 29,115 tons of shale and clay, from which 10,760,526 bricks and 5,879 tons of hollow tile were made.

There were 204 mines producing coal during the year, of which 6 were opened and 15 abandoned. In addition to the mines abandoned, 13 were closed.

At December 31st, 1942, 180 mines were in operation. This is a decrease of 27 mines as compared with 1941, a number of small mines not having been able to operate owing to lack of miners.

The number of men employed during the month of December was 9,129, being 100 less than for the corresponding month of 1941.

During the year, 467 miners were granted certificates, 106 of which were Class A and 361 Class B certificates. Due to the shortage of miners, an Order in Council was passed by the Provincial Government on November 16th, authorizing the granting of Emergency Coal Miners' Certificates to men with limited mining experience. Same, however, were only applicable to the domestic and sub-bituminous mines, and effective only until March 15th, 1943.

To December 31st, 198 of these certificates were issued, and while not wholly satisfactory, they gave considerable help to the mines at a time when same was most needed.

Samples of mine air were taken during the year by the inspectors, and sent to the Chemistry Branch of the Department of Mines, Ottawa, for analysis. This has been done in addition to tests made with the M.S.A. Methane and other gas detectors.

Samples of coal and coal-dust were collected and forwarded to the Industrial Research Council, University of Alberta, for analysis, and the coal-dust for tests as to inflammability.

All fatal and serious accidents have been investigated by the inspectors, who also attended the inquests held in their districts, this being in addition to the regular inspection of the mines. All complaints made to the Department were also investigated.

There were 14 prosecutions instituted for contraventions of The Mines Act, made up as follows: 1 operator, 2 managers, 2 overmen, 6 miners, 1 hoisting engineer, 1 roller repairer, and 1 haulage hand.

The protective equipment reported to us as being in use is as follows: 3,024 hard hats; 1,751 pairs of safety shoes; 734 pairs of goggles, and 245 pairs of knee caps. This is a considerable increase in the first three mentioned items compared with the year 1941.

Notwithstanding the gains made, several of the steam coal and also some of the sub-bituminous mines with high seams could greatly increase the number of hard hats in use with advantage to all concerned.

The use of purchased electrical power by the mines continues to increase, and more than 5½ million kilowatt hours were purchased than in 1941, the total being 41,491,573 k.w. hours for the year 1942.

During the year all the electrical plants and equipment at the mines were inspected, and at the end of 1942 there were 66 mines that were electrified and, in addition, 13 mines have electric miners' lamps, lighting or signals.

No strikes of a serious nature took place during the year, but some of a minor nature have occurred.

I regret to report that the number of fatal accidents for the year was 17. This compares with 48 in 1941, including 29 men killed in an explosion at the Brazeau Collieries, Ltd., Nordegg.

No explosions or ignitions of gas were reported during the year 1942.

A large number of mines that have previously been using Edison miners' electric lamps have now installed the latest models of these lamps, which not only provide a better light, but have other advantages.

It will be noted from the report that the use of explosives has increased in coal-getting in the Crowsnest Area, and while coal is very necessary to the war effort, the increased use of explosives is certainly not conducive to increasing safety in the class of mine, and the whole question of blasting in these mines may have to be considered.

One accident occurred on August 5th in No. 9 panel workings of the Cadomin Coal Co., Ltd., and resulted in the death of a fire-

boss and four other workmen. They were engaged in running coal from a battery when a rush of coal, which had become in a fluid state due to water, ran out, taking out the wing of the battery and catching the men.

Previous to the accident, an abnormally heavy rainfall had occurred, and it is believed some water had run into the mine saturating the soft coal. Very little warning appeared to have been given the men, and very little water was encountered afterwards. The coal that ran out was similar to washery sludge.

In the same panel at Cadomin, on November 10th, a fireboss and a miner met death by being overcome with methane gas.

A bump had occurred and was felt by most of the workmen in the panel. One was somewhat slow in withdrawing, and was overcome by the methane ejected. The fireboss evidently went up the angle to get him and was himself overcome, both being dead when taken out.

The large volume of methane gas given off suddenly at this mine still constitutes a problem in its operation, and it is intended to modify the present method of work in the hope it will tend to make the operation safer.

Recruitment from the mines also continues, and the labour situation is likely to become even more acute next fall than during the past season, unless something is done regarding the matter. An effort should be made by the authorities concerned to keep the domestic mines going steadily in order to retain their crews as far as possible.

The difficulty in obtaining experienced miners and other skilled help necessary to operate the mines has become increasingly difficult this year. Absenteeism amongst the miners has also increased.

A scarcity of certificated officials, such as fire-bosses and pit bosses, is beginning to arise, and some changes may have to be made in The Mines Act to meet the situation.

During the summer very heavy rainfalls occurred on the mountain sections, and flooding occurred in some of the mines in the Crowsnest and Mountain Park areas. This restricted output and caused considerable trouble.

On January 6th, the Honourable Mr. Justice A. F. Ewing, of the Supreme Court of Alberta, who had been appointed a Commissioner to enquire into the cause of the explosion that occurred in the No. 3 seam of the Brazeau Collieries, Ltd., Nordegg, on October 31st, 1941, opened his enquiry at Nordegg, and the hearings were concluded on January 16th, 1942. His Honour's report and findings have since been made public. This enquiry and other matters arising from the accident took up considerable of my time, as well as some of the other inspectors, during the year.

No new operations of importance have been started, but the West Canadian Collieries, Ltd., Blairmore, has done work on their Byron Creek property, preliminary to starting a mine there. The work will be driving entries along the outcrop and working rooms up the pitch. It is intended to haul the coal by truck to the Bellevue Mine, and the cleaning and preparation of the coal be done there.

Two mines have been opened at Luscar, similar to that described. A considerable tonnage is being obtained, the coal being hauled by truck and passed over the main tippie.

With the great demand for coal, other operations of a like nature are likely to start up this year. Cars should be taken in such cases to plan so as to safeguard the underlying coal, and also to provide outlet to the surface for the future ventilation of the lower workings.

Failure to have this carried out in the past has caused the loss of tremendous tonnages of coal, and also loss of life in some cases.

Very little coal has been produced in the Peace River Area (Halcourt and Grande Prairie) during 1942. The seams there are thin, and few of the mines that usually operate, opened up last fall. With the large population in that section of the country, the fuel problem is likely to become very serious next winter, and steps should be taken by those concerned to meet the situation.

The shortage of labour has caused some of the mines to increase the use of loading machines. At Cadomin, all the mucking in the rock tunnels is now being done with Emrico-Finlay loaders, and in the Province 29 Goodman duckbill loaders are in service in the different mines, loading from the face on to the accompanying conveyors.

The following are some of the most important points covering plant changes and other improvements that have been made during the year at the different mines:

At No. 8 Mine of the Lethbridge Collieries, Ltd., a new recovery and air cleaning plant to recover small coal from refuse and pickings off the tables, and also to treat all standard coal from the mine below 1½ inch round perforated screen has been constructed.

A borehole with transmission line equipped with transformers 2300-200 volts, to transmit power for underground work, has been completed.

One Goodman permissible coal-cutter has been installed, two Goodman duckbill units with drive leads and conveyor pans, three Chicago pneumatic hand drills, five Meco blowers, and other underground equipment, washhouse extension and other plant improvements have been made at this time.

At the Standard Mine of this company, one Goodman duckbill loader with conveyor was installed underground. Additions were made to the screening plant and also to the repair shop.

At the new mine being developed by the J. J. Hamilton Coal Co., near Lethbridge, a new main shaft 8ft. by 9ft. has been sunk 235 feet to the coal. A temporary change-house has been erected and considerable other work done. An increased output can be expected from this mine.

In the same district, the Kerralta Coal Co. has sunk a new air shaft 5 ft. by 5 ft., 140 feet to the coal. A centrifugal pump and other equipment has also been installed.

At the strip pit operated by Victor W. Campbell near Grassy Lake, in the Taber Area, a new power shovel has been purchased and is now in use.

At the International Mine, Coleman, a 6ft. by 3ft. double inlet reversible Jeffrey fan is being installed, and is to be driven by a

150 H.P. motor. It is expected to deliver about 100,000 cubic feet of air per minute with a 2inch W.G.

Few extensions have been made in the tippie, but a housing of reinforced concrete has been made for the Vissac dryer and conveyor. The use of steel arching is being tried out at this mine. The length of the "A" level rock tunnel is now well over 10,000 feet from the portal.

At the Greenhill Mine, Blairmore, various changes have been made, both above and below ground. A new sink and float washer have been installed, also two new Dillion screens.

The washhouse has been increased in length by 25 feet and 100 extra lockers installed. At the Bellevue Mine of the same company, a new crusher has been put in at the tippie. Two new prospects are being opened near the outcrop about a mile north-west of the Bellevue Mine entrance.

At the Mohawk Mine, Bellevue, considerable work has been done in prospecting and proving up the seams there. A new Goodman duckbill loader and a shortwall undercutter have been installed, also various electrical installations and additions.

A new 1,700 cubic foot per minute Canadian Ingersoll Rand Air compressor driven by a 300 H.P. English electric comp. motor, to meet the demand for more compressed air, has been put into service at this mine.

A new Aerovane type fan driven by a 20 H.P. Canadian General Electric motor was installed at the outcrop near the main slope hoist to assist in the ventilation of the upper levels.

At the Cadomin Mine the work of driving the rock tunnels to the east of the shaft has been carried on for some time, and good progress made. It is intended to develop workings on the east side from these tunnels in a manner similar to that now carried on in the west side.

A Vissac dryer has been installed on the surface for the purpose of drying small coal, sizes up to  $\frac{3}{4}$ in. at a rate of 75 tons per hour. This unit is separate from the tippie.

At Foothills Collieries, Ltd., a 1,000 cubic foot capacity compressor has been installed for the purpose of providing power for air-driven coal-cutters which are to be installed.

Transformers and other additions to the electrical equipment have been made at this mine.

At the McLeod River Mine, Mercoal, the slope has been sunk another 500 feet, and entries started east and west off same.

A Keith single inlet fan of 75,000 cubic feet capacity has been installed at the top of No. 19 heading, also a single drum electrically driven hoist at the same location. A new hoist at the top of the main slope has been put in.

Various extensions to electrical equipment and compressed air lines, together with a 1,500 cubic foot per minute compressor, also a 400 K.W. generator and condensing unit, and two H.R.T. boilers of 150 H.P. each.

A new office building, three modern houses, 26, 2-room cottages and other improvements and extensions have been made.

A Mancha storage battery locomotive of 7½ tons capacity and charging unit have been installed underground at this mine for haulage purposes.

At the Lakeside Mine, Robb, a 350 H.P. Allis Chalmers generator was installed, also a fan to ventilate the east side, and a new pump.

In the Drumheller district, the Empire Collieries, Ltd., East Coulee Mine, installed one Goodman shortwall under-cutting machine and one 4-foot disc fan driven by a 15 H.P. motor.

The Hy-Grade Mine has made considerable additions both above and below ground to their electrical machinery.

The Western Crown Mine has completed the tippie, and the Newcastle Collieries constructed a slack bin of a capacity of 60 tons.

At the Commander Mine, a shaft 12ft. by 20ft. has been sunk to the coal seam, which at present is being used as an airshaft, but later will be the main hoisting shaft.

The Regal Mine installed one Goodman battery locomotive and charging set. The Minute Mine put into service one C.E. 7 Sullivan coal-cutting machine.

The Red Deer Valley Mine has installed at their mine one new water tank, 18 ft. diameter by 19 feet high. One store room, 26ft. by 24ft., and one hospital, 26ft. by 8ft have been built.

Installations of detaching hooks for over-winding also were made.

In the Edmonton-Camrose district no new developments or improvements of special importance have been noted, but fan installations and other improvements in some cases have been carried out.

The Brazeau Collieries, Ltd., Nordegg, has installed a number of pneumatic picks, shot-firing having been eliminated since the explosion.

A new unit has been added to the briquetting plant, and over 60 new cottages have also been built.

At the Camrose Mines, Canmore, 3 additional duckbill loaders have been installed, these discharging on to a rubber belt 800 feet long, which has also been put in this year.

During the year, Mr. John T. Burton resigned his position as District Inspector of Mines at Drumheller, to accept a position as Mine Manager of the Hy-Grade Mine, and was succeeded by Mr. J. A. Dutton, who formerly had been manager at Mountain Park Coals, Ltd., Mountain Park.

## ANNUAL PRODUCTION OF COAL FROM MINES IN THE PROVINCE OF ALBERTA

\*The sum of Canadian coal-mine sales, colliery consumption, coal supplied to employees, and coal used in making coke, etc., less the tonnage of coal exported.

<sup>†</sup>Includes small tonnages from countries other than Great Britain and the United States. Deductions have been made to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores.

- (a) Includes imports into the Yukon Territory of 10 tons in July and 10 tons in October.
- (b) Consists of 9,168,428 tons imported from the United States, 380,645 tons imported from Great Britain, 43 tons imported from Alaska, 285 tons imported from Norway, 55 tons imported from Estonia and 1 ton imported from Poland.
- (c) Consists of 1,670,085 tons imported from the United States, 1,454,521 tons imported from Great Britain, 205,045 tons imported from Germany, 67,220 tons imported from Belgium and 54,447 tons imported from French Indo-China.
- (d) Includes imports into the Yukon Territory of 4 tons in April, 3 tons in May, 6 tons in June, 45 tons in July and 2 tons in October.
- (e) Consists of 10,042,127 tons imported from the United States, 149,905 tons imported from Great Britain, 9,421 tons imported from Germany, 361 tons imported from Norway, 124 tons imported from Denmark, 45 tons imported from Sweden, 35 tons imported from the Netherlands, 134 tons imported from Estonia, and 286 tons imported from Newfoundland.
- (f) Consists of 1,685,848 tons imported from the United States, 1,331,279 tons imported from Great Britain, 359,994 tons imported from Germany, 33,543 tons imported from Belgium, 122,572 tons imported from French Indo-China, 16,231 tons imported from the Netherlands, and 1,120 tons imported from China.
- (g) Includes imports into the Yukon Territory of 4 tons in March, 6 tons in May, 6 tons in June, 45 tons in July and 2 tons in October.

- (h) Consists of 12,333,378 tons imported from the United States, 56,073 tons imported from Great Britain, 54,061 tons imported from Germany, 113 tons imported from Norway, and 200 tons imported from Estonia.
- (j) Consists of 2,003,317 tons imported from the United States, 1,134,855 tons imported from Great Britain, 258,257 tons imported from Germany, 8,131 tons imported from Belgium, 134,495 tons imported from Russia, and 78 tons imported from Morocco.
- (k) Includes imports into the Yukon Territory of 8 tons in March, 10 tons in July and 8 tons in October.
- (l) Consists of 9,644,020 tons imported from the United States, 65,957 tons from Great Britain, 34,258 tons imported from Germany and 417 tons from Japan.
- (m) Consists of 1,973,610 tons from the United States, 1,199,131 tons from Great Britain, 407,031 tons from Germany, 34,182 tons from Belgium, 14,952 tons from Russia, 19,645 tons from Morocco, 37,594 tons from the Netherlands, and 30,302 tons from French Indo-China.
- (n) Includes imports into the Yukon Territory of 15 tons in July and 8 tons in December.
- (o) Consists of 9,836,110 tons from the United States, 67,483 tons from Great Britain and 20 tons from Norway.
- (p) Consists of 2,605,765 tons from the United States, 1,034,901 tons from Great Britain, 293,602 tons from Germany and 43,537 tons from French Indo-China.
- (q) Consists of 2,643,588 tons from the United States and 1,321,274 tons from Great Britain.

## PARTICULARS OF WORK DONE IN SHALE MINES IN THE PROVINCE DURING 1942:

Output of shale (in tons) used making bricks	22,982
Output of shale (in tons) making hollow tile	6,133
Number of shifts worked	13,409
Average number of men employed	53
Explosives used (pounds), 40% dynamite	3,301
Number of shots fired using fuse	1,494
Total number of bricks made	10,760,526
Total number of bricks put to stock	
Total number of bricks lifted from stock	218,591
Bricks sold for use in:	
Alberta	4,848,266
British Columbia	2,108,885
Saskatchewan	2,565,406
Manitoba	1,389,560
Ontario	62,500
North West Territories	4,500
Total	10,979,117
Hollow tile made (tons)	5,879
Hollow tile put to stock (tons)	916
Hollow tile sold	5,178
Hollow tile lifted from stock	215

## PARTICULARS OF WORK DONE BY FARMERS STRIPPING COAL UNDER DOMESTIC PERMIT

Tonnage	145
Number of days worked during the year	35
Number of men employed during the year	28
Total number of shifts worked	67
Total number of permits issued	17
Total number of permits used	15

The above coal was stripped for domestic use only, and not for sale.

\*Includes output from Alberta and Saskatchewan. Previous to 1922 sub-bituminous was included in bituminous coal.

During the year 1909 a strike affecting all the larger mines in the Province, lasted for a period of three months.  
 During the year 1911 a strike affecting all the larger mines in the Province, lasted for a period of eight months.  
 During the year 1917 a strike affecting all the larger mines in the Province, lasted for a period of three months.  
 During the year 1919 a strike affecting all the larger mines in the Province, lasted for a period of three months.  
 During the year 1922 a strike affecting all the larger mines in the Province, lasted for a period of five months.  
 During the year 1924 a strike affecting all the larger mines in the Province, lasted for a period of six and one-half months.

NOTE.—The table showing the number of men employed in the Anthracite Coal Field, includes employees at the briquetting plant. There has been no anthracite coal produced since 1923.

\*Calculating the total per capita production for men employing underground, the tonnage mined from stripping pits was deducted and only the tonnage produced from mines was used.

It will also be noted that the tonnage used in the above and following tables does not include tonnage extracted under permit.

## ELECTRICITY

The rules for the installation and use of electricity in or about mines requires a return to be made to the Department on or before January 15th of each year, giving size, type and any other particulars which may be required of electrical apparatus in use above and below ground. According to the return received from the different mines, electricity was used in 66 different mines in 1942. A summary of these returns regarding the horse-power of electrical apparatus in use is given below.

## FATAL ACCIDENTS

August Schroeder, pusher, age 49, on January 12th, in the mine operated by E. B. Foye. While waiting on car being loaded at the working face, he was struck by rock falling from the roof, causing instant death.

Peter Barhen, driver, age 41, on February 14th, in the mine operated by Luscar Coals, Ltd. Was trying to unhook tail chain from trip in snowshed at east entry when he was caught against a standing car on parting near the dump, causing fatal injuries to his head.

Laddie Koran, miner, age 29, on March 29th, in the mine operated by Hillcrest-Mohawk Collieries, Ltd. While preparing to set a prop at the face of No. 7 cross pitch, some rock fell from the roof and buried him, causing immediate death.

Thomas Davies, buckler, age 17, on June 29th, in the mine operated by the Luscar Coals, Ltd. Was caught between moving trip and chute at No. 15 raise 4 W, causing internal injuries, from which he died the following morning.

Robert Dimich, miner, age 41, on July 1st, in the mine operated by Mountain Park Coals, Ltd. While at work in No. 10 pillar No. 1 slope, he was buried by a fall of coal, and was dead when the rescue party found him 12 hours later.

Joseph Kish, miner, age 39, on July 27th, in the mine operated by Brazeau Collieries, Ltd. He was mining coal at the face of No. 14 room 1 level No. 2 seam when the timber broke, allowing the roof to cave, causing his death.

J. Dombrowski, miner, age 53, Carl C. Stock, miner, age 53, John Vallance, miner, age 52, V. Allegetto, chute loader, age 40, and John T. Logan, fireboss, age 60, on August 5th, in the mine operated by the Cadomin Coal Co., Ltd. While pursuing their several duties, some water and coal that had become like sludge, at No. 4 footwall split battery, No. 9 panel, came running out causing their deaths.

Alex. Marconi, miner, aged 41, on September 14th, in the mine operated by The Foothills Collieries, Ltd. He was undermining at face of 16 room 5th level south, when the top coal pushed the sprag out and fell on him, causing fatal injury to spine.

Robert Pearson, trapper, age 60, on September 16th, in the mine operated by Brazeau Collieries, Ltd. He was attending door No. 2 slope when he was struck by a runaway trip of cars, causing fatal injuries.

John Strachan, duckbill operator, age 42, on September 18th, in the mine operated by Rosedale Collieries, Ltd., Rosedale. Was removing loose rock preparatory to setting timber in No. 2 south entry, when he was struck by rock from the roof, causing fracture of both femurs and other internal injuries, from which he died in hospital on November 28th.

Charlie Swanson, timberman, age 64, on November 10th, in the mine operated by Cadomin Coal Co., Ltd. While at work in 3rd cross-cut on 1 main angle, 9 panel, he was asphyxiated by a sudden inflow of gas caused by cave in pillar at five footwall split.

Robert Muir, fireboss, age 57, on November 10th, in the mine operated by Cadomin Coal Co., Ltd., in No. 1 main angle, 9 panel. Muir went up the angle to withdraw the men owing to a sudden inflow of gas and was evidently trying to get Charlie Swanson, timberman, when he was asphyxiated.

Mike Zelenik, miner, age 48, on November 20th, in the mine operated by Luscar Coals, Ltd., caused by his being buried by falling coal, which suffocated him.

In addition to the above, Alonzo McPhee, motorman's helper, age 25, died on March 6th from hypostatic pneumonia caused from the effects of injuries sustained in the mine operated by the Murray Collieries, Ltd., on December 12th, 1941.
